A Trained on SemEval 2013

13,789 training instances, annotated sentences

Training regimes

- ● Sentence-trained: the annotated sentence
- ■ Mixed-input: sentence plus names-only copies
- △ Names-trained: the two names
- ◇ Masked-trained: drug mentions masked

Encoders

BiomedBERT, BERT-base, BioBERT

E9 panel:
20 models over 10 backbones

B Tested on drugs SemEval never saw

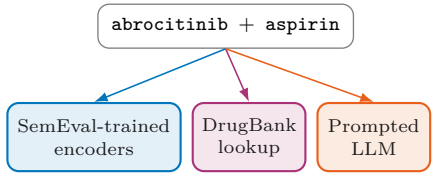

FDA approvals 1985 to 2024, minus SemEval drugs

Novel 2020 to 2024 (48 drugs, 438 pairs)
Older 1985 to 2012 (135 drugs, 1,944 pairs)
Older-clean 128 drugs (H1); Older-primary 121 drugs (Amendment 7)

Positive: partner named under Drug Interactions in the drug's label.
A mention, not a validated interaction (see the E8 oracle check).
Negative: the same partner with another cohort drug whose label never names it.

Drug Interactions section held out from retrieval, except in the positive controls. Private, version-controlled analysis plan, every amendment disclosed.

C Same two names to every system

D Why partner-matched negatives
